NUCA WINS: Our New Onsite Incident Reporting App

Web-Based Incident Manager
Now Available to NUCA Members

Responding to the industry's many worries about accurate onsite incident reporting, NUCA released a new member's benefit in September: a smartphone app that can easily record utility strikes and onsite incidents. NUCA WINS is a powerful iOS and Android app that can document injuries, utility strikes, employee illnesses, near misses, and safety observations in real-time.

NUCA WINS was designed by industry experts to prevent the negative consequences of delayed and inaccurate workplace incident reporting. Powered by app partner Compatica's intuitive software, this point-of-occurrence incident recording app allows authorized users to quickly report a variety of jobsite events, such as employee injuries and illnesses, property and utility strikes, for-record-only needs, near misses, and safety observations.

This powerful web-based incident manager can be the modern answer

to the reporting requirements the utility construction industry generates through its work on jobsites.

The app is already winning converts to its ease-of-use and adaptability. "With NUCA WINS, we've been able to quickly record utility damage incidents, employee injuries, and other risk incidents right away," said Kara Habrock, President & CEO of NUCA-member L.G. Roloff Construction, in Omaha, Neb.

"Using the app has improved our claims handling process. We are more organized and efficient because of NUCA WINS. All of the incident information and photos are in one place in a timely fashion – and that has been a gamechanger for us. I highly recommend this app," said Habrock.

On-the-spot worksite reporting is the best way to avoid delays in recording incidents, most of which carry liability concerns. With NUCA WINS, a supervisor can make a complete event report, including pictures and audio recordings. It can record incident locations, equipment involved, and witness statements. The app also easily allows supervisors to record near-misses and workplace safety observations.

"Damage incident reporting and illness prevention are daily concerns for our members, especially in today's world," remarked Doug Carlson, NUCA's CEO. "This new app on a supervisor's smartphone or tablet delivers an efficient solution for a problem that consumes valuable time and company resources. With NUCA WINS, our members have the power to report and fully document incidents immediately, while addressing liability and reducing cumbersome paperwork."

Employee health and illnesses can

also be recorded with NUCA WINS, allowing supervisors to report issues immediately after recognizing them. E-signed attestations and waivers are instantly accessible, and employees can be referred to an approved clinic if there are injuries requiring medical attention.

NUCA WINS provides all the data required for FROI, OSHA and other workplace incident forms. Once entered into the app, Workers' Compensation recording needs are delivered in a timely fashion. It delivers immediate text and e-mail notifications, and securely stores this information in a password-protected cloud system.

Where an incomplete assembly of facts can and will drive up the costs associated with utility strikes, injury claims, or safety events, using NUCA

WINS avoids these costly delays. Using this app on the jobsite helps contractors manage or avoid contentious utility damage claims, avoidable legal actions, delays in recognizing immediate health issues, and reduces opportunities for fraud. Usage of the app can cut significant costs from contractors' bottom line.

NUCA WINS is only available to NUCA members. And because NUCA is committed to providing benefits and services to its members that help them every day on the job, the subscription for NUCA WINS is also offered at a reduced cost to members in good standing.

NUCA encourages our members to request a demo of NUCA WINS and find out for themselves just how powerful this new tool can be on their jobsites.

Call NUCA's membership department at 703-358-9300, or visit www.NUCAwins.com to start discovering just how handy this app can be for your company's operations.

Doosan DL580-5 Wheel Loader

Doosan Infracore North America LLC, is expanding its wheel loader lineup with the new DL580-5 wheel loader. This machine offers customers a two-pass fill wheel loader for over-the-road, 24-ton capacity trucks, improving operational efficiency and reducing load-out cycle times.

The Doosan DL580-5 wheel loader is designed to serve customers in mining and aggregate work, and it is capable of heavy-duty construction tasks. This model is able to move large amounts of abrasive material while providing operators with comfort and increased uptime. The DL580-5 also serves the operator and owner with its efficiency of offering the two-pass fill and bucket selections that are made to last through harsh material handling tasks.

The wheel loader is also equipped with an enhanced front work group that features a reinforced Z-bar, a larger profile arm and lift cylinder geometry that work together to improve lifting capacity and performance.

The model also has a larger volume steering pump and cylinders, which help to maintain steering efficiency with larger loaded weights. In addition, Doosan provides a heavier counterweight to offset larger load capacities.

NUCA WINS

Onsite Incident Reporting in the Palm of Your Hand

NUCA WINS is a new tool for on-the-spot incident reporting.

Designed by industry experts, NUCA's Workplace Incident Notification System (WINS) is an iOS or Android mobile device app that can document a situation in real time. In a matter of minutes incidents like these are completely recorded:

- Injuries and Illnesses
- Property, Liability, and Utility Strikes
- Near Misses
- Safety Observations
- Fit For Work Employee Screening

Are you ready to WIN? Call for your demo today and empower your company tomorrow.
